PLEASE READ CAREFULLY

Anesthetic Procedures & Risks

We use a combination of pre-anesthetic medications/injectable and/or inhalant anesthetics to achieve optimum levels of anesthesia that are safe for your pet.

For short procedures, an injectable anesthetic is given alone that produces a good plane of surgical anesthesia with a quick recovery.

For most procedures, your pet is anesthetized and then intubated (insertion of a tube into the trachea or wind pipe). This will ensure that your pet is able to receive oxygen at all times and prevents aspiration of any fluids into the lungs.

For procedures that require minimum sedation, an injectable anesthetic is given that produces a good plane of sedation with quick recovery. Anesthesia is maintained with a gas anesthetic, Isoflurane, which is very safe and is not metabolized by the body. This allows us to have more control over anesthetic depth and it is less irritating to the airways. Another advantage to Isoflurane is a quick induction using a mask verses using injectable anesthetics that require metabolism from the body.

Monitoring & Pain Management

A member of our staff monitors the patients during both anesthesia and recovery.

Our clinic strongly believes in compassionate, quality, medical care for our patients. As a result, all surgery patients will receive pain management (medication and/or laser therapy) before, during and after surgery. Additionally, pain medications may be dispensed home. Additional information will be given at discharge. We hope this program will reduce any discomfort experienced and aid in a quicker recovery.

Potential Surgical Complications

- 1. Canine and Feline Spay**
 - a. Bleeding, Infection, Urinary Incontinence, Weight Gain, & Suture Reactions
- 2. Canine and Feline Castrations**
 - a. Bleeding, Infection, Scrotal Swelling & Suture Reaction (Canine Only)
- 3. Feline Declaw**
 - a. Bleeding, Infection, Limping/Lameness & Regrowth of Nail
- 4. Tumor/Lump Removal**
 - a. Bleeding, Infection, Swelling or Drainage & Suture Reaction

It is important for you to understand that there is always a risk of anesthetic and surgical complications anytime these procedures are performed. We strive to take the highest quality care of your pet and take all the added precautions you allow to avoid potential problems.
